

What is claimed is:

1 1. A wireless communication system comprising a
2 first terminal apparatus and a second terminal apparatus,
3 wherein

4 said first terminal apparatus comprises:

5 a computer for generating image information;

6 a first wireless communication section for performing
7 first wireless communication through a first communication
8 channel defined depending on a second communication channel
9 thereby to transmit said image information to a third
10 wireless communication section of said second terminal
11 apparatus; and

12 a second wireless communication section for receiving,
13 from a wireless communication base station, second
14 communication channel specifying information specifying
15 said second communication channel which is a communication
16 channel used for wireless communication with said wireless
17 communication base station; and wherein

18 said second terminal apparatus comprises:

19 said third wireless communication section for
20 receiving said image information; and

21 a displaying section for displaying said image
22 information.

1 2. A method for controlling a wireless communication
2 system comprising a first terminal apparatus and a second

3 terminal apparatus, said method comprising:

4 wireless communication step in which said first
5 terminal apparatus receives, from a wireless communication
6 base station, second communication channel specifying
7 information specifying a second communication channel which
8 is a communication channel used for wireless communication
9 with said wireless communication base station;

10 image information generating step in which said first
11 terminal apparatus generates image information;

12 wireless communication step in which said first
13 terminal apparatus transmits said image information to said
14 second terminal apparatus by wireless through a first
15 communication channel defined depending on said second
16 communication channel;

17 wireless communication step in which said second
18 terminal apparatus receives said image information by
19 wireless; and

20 displaying step in which said second terminal
21 apparatus displays said image information.
